

- We had a guest lecture from Jens Svalgaard Kohrt on SDU's supercomputer Abacus 2.0, we also went for a small excursion and visited Abacus 2.0.
- In week 45 Chapter 5 of the course book was discussed ("Analytical Modelling of Parallel Programs"). Note that this Chapter is essential for the understanding of scalability and isoefficiency analyses that we will discuss during the next weeks. I **strongly recommend** to carefully read this Chapter in the book, as the understanding is essential for the following lectures..
- The third and last mandatory assignment will be published end of week 46.
