DM509 Programming Languages, Fall 2009, Action Plan

The course DM509 Programming Languages was evaluated as I ran it for the first time. Out of the 29 students, 14 have answered the course evaluation sheet. Two of them only answered partially.

The evaluation was very positive with the exception of the course material. As the problems with the course material are unlikely to occur next time, this indicates that according to the evaluation, no major changes to the course are required.

The problem with the course material was that new lecture notes were prepared during the period of lecturing. Due to me covering for a sick colleague with respect to the organization of DM526, the lecture notes were not always available sufficiently ahead of the lectures. This problem is unlikely to occur next time as the lecture notes will be available from the start.

One comment also remarked that the lecture notes were not extensive enough in some parts. I am planning to rework and extend the notes for the next iteration of the course in any case. So this complaint will also be covered.
